Revolutionising Skin Rejuvenation with SuneKOS

A Unique Approach to Skin Health

SuneKOS is a breakthrough in skin rejuvenation, working deep within the skin to restore vitality and youthful radiance. Unlike traditional treatments, SuneKOS enhances the **extracellular matrix (ECM)**—the foundation of healthy skin—by combining a patented blend of hyaluronic acid and **essential amino acids (HY6AA)**. This synergy provides both immediate hydration and long-term structural repair, delivering **natural, long-lasting skin rejuvenation** without altering facial expressions.

A Two-Step Protocol for Superior Results

SuneKOS follows a **strategic two-step protocol** designed to address multiple signs of skin ageing.

Step 1: SuneKOS 1200

Lays the foundation for repair and protection.

The first step uses **SuneKOS 1200**, a formulation designed to provide **structural support** and **combat inflammageing**—the process where chronic low-grade inflammation accelerates skin ageing.

Key Benefits:

- Antioxidant protection
- Fibroblast support (cells responsible for collagen and elastin production)
- Deep hydration

Step 2: SuneKOS Performa

Supercharges collagen and elastin production.

Following SuneKOS 1200, **SuneKOS Performa** takes the rejuvenation process further by deeply stimulating collagen and elastin synthesis, **restoring the skin's extracellular matrix** for improved tone, elasticity, and texture.

Key Benefits:

- Intensified collagen stimulation
- Enhanced elastin production
- Long-lasting skin hydration and resilience
